

It is my understanding that the FCC supports diversity and competition in the DBS market. Voom HD LLC wishes to continue operating at the 61.5 orbital slot in order to continue to bring quality HDTV signals to the public. No other DBS provider can match the High Definition offerings that Voom currently has. I am a subscriber to Voom and wish it to continue operating, bringing much needed competition to the DBS arena. Please vote to reject the sale of Rainbow 1 operating frequency licenses to Echostar.
